

December 2009

I am pleased to announce that the Perry Local Schools have converted over to Edulog. I came to Perry in July from another school district where Edulog was used. I felt that Edulog was faster and much more user friendly than the bus routing program Perry was using. It's the most capable I have used, and provides the results I need to get the job done right. You were not able to make all of your changes on one screen as you can with Edulog. You had to open one screen to make changes on the AM routes, close that screen and then open the PM routes and make your change and so on. On several occasions the program would freeze up and you would lose all of the work you just did.

The support we received from Edulog during the transition was great. Any time we had a question we were able to get the help we needed from the support staff at Edulog. The overall building of our system went very well too. There were a few items that I needed assistance with when it came to building custom reports, but after making a phone call to the helpful and knowledgeable people at Edulog, the report was created.

I also hope to buy Edulog GPS soon, so I can start routing buses even more efficiently with their GPS based routing system. I see this as the way of the future, and look forward to making the change that many other school districts have already done.
