PURPOSE OF THIS GUIDE

The Athena Bell Times Run Covers Training Guide will provide you with explanations of the basic tools within Athena, walk you through the procedure of verifying run directions and altering run paths within the software, as well as provide you with specific scenarios you may encounter as you begin to independently navigate the system within the User Stories section of this guide.

ATHENA BELL TIME RUNS COVERS INTRODUCTION

The Bell Times Run Covers Module is the final step in the Bell Times workflow. In this layer you will work towards finalizing the runs you built within the "Run Masters" layer through the verification of run directions and the altering of run paths when necessary. When you have finalized the runs for your school/district, users will have the ability to view Run Directions through a downloaded CSV file, or within the Reporting module in Athena Routing Management.

ATHENA MAP ASSET KEY

NAVIGATING THE BELL TIMES RUN COVERS MODULE

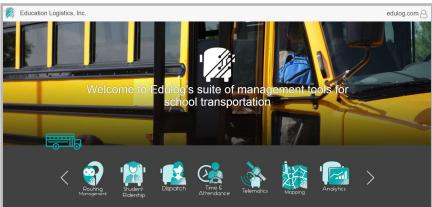

1. Sign In

You will first come to the Sign In page where you will enter your Username (email) and Password.

2. Athena Portal Home Page

You will be brought to the Athena Portal Home Page; at the bottom of this screen are the Athena applications.

3. Routing Management

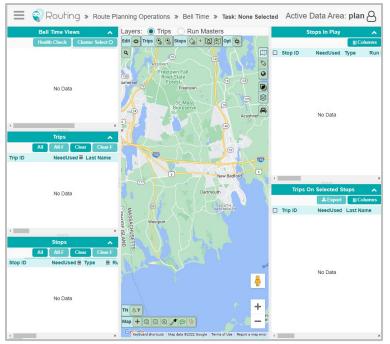

Select the owl icon to enter the Routing Management application.

4. Route Planning Operations

Navigate to "Bell Time" under Route Planning Operations.

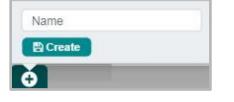

Note: This module will not display any data until a task is created.

5. Creating a Task

Hover over the "+" sign in the lower left of the module and craft an identifiable name for your task—select Create.

If you do not create a task the system will create one for you and record a timestamp.

6. Augment Context

The Augment Context window will automatically populate following the creation of a task. In this window, choose your School and Bell Times in either the School or Cluster drop down.

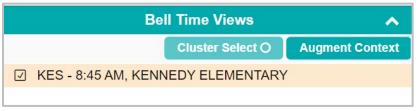

Additionally, select the "Runs to Load", "Stops to Load", and "Trips to Load"—the system will default to ALL.

gment BellTime Context								
								Cancel
					_

Unassigned Tri	To Load: All	None Choose	Subset		•			•
onaboighter m			00000					

When you have completed your search augmentation, select "OK" in the top right of the window; the Bell Time information for your school will populate in the Data Panel.

7. Bell Time View

The school and selected Bell Time will appear in the Data Panel; select the bell time by checking the box to the left. Once selected, all Runs, Stops and Checkpoints for that School and Bell Time will load in the Data Panel.

8. Layers

Above the map panel, you will have the ability to choose which layer you want to work with, or toggle between multiple.

- Trips: Student Trips from the Trips Module.
- Run Masters: Master Runs from the Runs Module.
- Run Covers: Run Frequencies from the Runs Module.

9. Data Panel

Select the School and Bell Time by checking on the box to its left in the "Bell Time Views" card. Once selected, the Bell Time, and all the Runs, Stops and Checkpoints for that school and Bell Time will load in the Data Panel.

		Bell Ti	me Views			^

You can select all, clear all, and individually select stops, checkpoints and runs by using the buttons at the top of each card in the Data Panel.

10. Expand and Collapse Cards

- Up Arrow: Fully collapse card above.
- Double Arrow: Fully collapse card above and below.
- Down Arrow: Fully collapse cards below.
- Double Box: Reset cards.

11. Select Run

When you select a run(s), it will display graphically on the map, as well as being listed in the Workspace Panel under "Run Covers in Play".

Run Covers In Play								^

12. Paths Tool

Education Logistics, Inc. Confidential Information. Do not communicate, disclose, or make available all or any part of this document without permission.

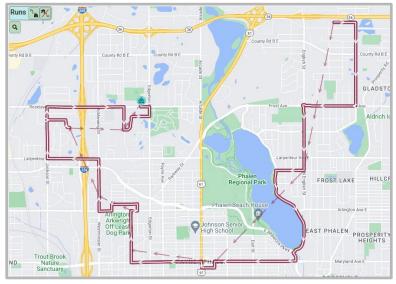

Using Run KES 101 as an example, to view the Run Directions the user will first need to turn on the Paths view—select the Run Tool located in the upper left of the Map Panel.

After you turn on the Run Paths, the user will select the run in the Workspace Panel under "Run Covers in Play".

Run Covers in Play									^
	MO	то	wo	UO	FO	🕼 Paths	Direction	15 Override 🗸 🔰

Education Logistics, Inc. Confidential Information. Do not communicate, disclose, or make available all or any part of this document without permission.

To follow the bus's path on the map, and see the remainder of the run directions in play, click the down arrow on the keyboard; this will take the user to the next instruction and highlight the path in green on the map.

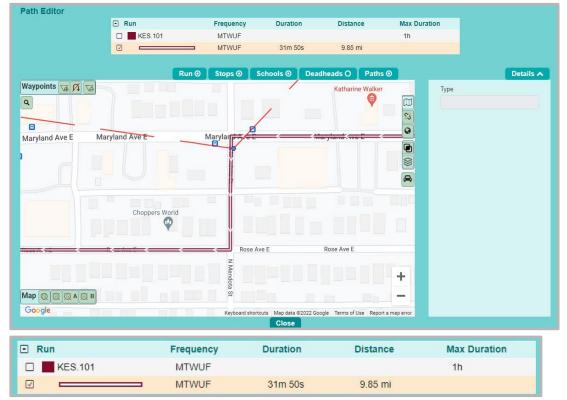

17. Paths Button

When the user comes across directions that are incorrect, they can change the run paths by selecting the "Paths" button located in the tool bar of the "Run Covers in Play" card.

When selecting this button, the "Paths Editor" window will open; zoom to the path that needs to be changes, and check the Run Cover is selected.

18. Creating Turnarounds

Navigate to the "Waypoints" tool in the "Path Editor" window located in the upper left of the map view—select the "Add Waypoint" tool, and turn on the "Turnaround" tool.

Education Logistics, Inc. Confidential Information. Do not communicate, disclose, or make available all or any part of this document without permission.

Select the spot where a turnaround is needed; the turnaround waypoint will display in green and the path direction will update.

19. Creating Waypoints

As an example, there is construction on Nevada St and we would like the run directions to go south on Bradley St. Zoom to the path you want changed, and turn on the "Add Waypoint" Tool. Locate the red line/direction you want changed and click on it. Drag the waypoint to the location you want the path to go.

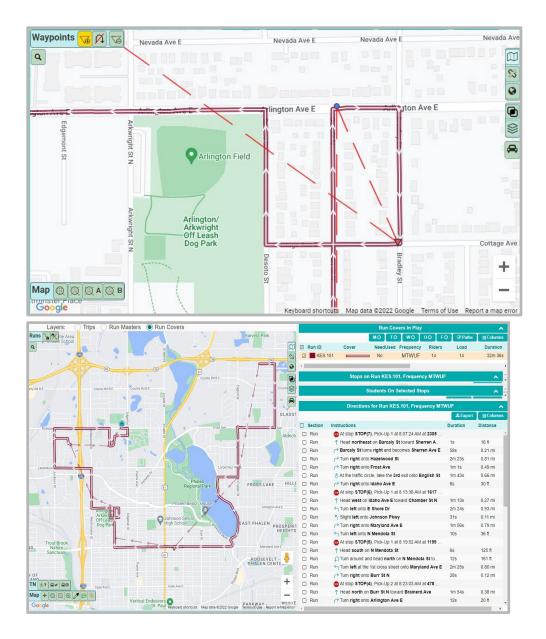

Drag the waypoint to the location you want the path to go-the path will update accordingly.

To remove a waypoint, select the "Remove Waypoint" Tool, and click on the waypoint you want removed.

Once you have finished making your changes in the "Path Editor", close the window by selecting the Close button—your paths and Run Directions will update.

20. Export

After the user has made the necessary changes and verified the Run Directions, the user can export the directions with the "Export" button.

A CSV file will download to the user's downloads folder. To view the directions, select the file and expand the columns to view all of the data.

You can print the exported file, or view the directions in the Reporting module.

Please see the "Athena Reporting Resource Guide" for reporting instructions.

ATHENA USER STORIES

The User Stories section of this guide will offer you scenarios that are applicable to some of the workflows you might encounter in your day-to-day tasks within Athena. Some scenarios that will be discussed include:

- Review Run Directions
- Adjust and Reset Stop Times on Selected Runs
- Add a Turnaround
- Add a Waypoint

Review Run Directions

You and your team have spent the last week working in the Bell Time Trips and Run Master layers building runs for the upcoming school year. You now need to review and finalize the developed runs, and their Run Directions, within the Run Covers layer.

Here's How

1. Creating a Task

Hover over the "+" sign in the lower left of the module and craft an identifiable name for your task—select Create.

Name	1
Create	l
Ó	

2. Augment Context

The Augment Context window will automatically populate following the creation of a task. In this window, choose your School and Bell Times in either the School or Cluster drop down.

Augment Co	ntext							
						Cancel	ОК	
School	Bell Times fro			With E	Bell Times fr	rom a Cluster		
Bell Times fo	r Chosen School		Sc	hool/Bell Tim	ies in Chosen C	luster		
School	Туре	Bell Time		School	Туре	Bell Time		
☑ KES	ARRIVAL	8:45 AM						
C KES	ARRIVAL	12:45 PM			No Rows To	Show		
C KES	DEPART	11:45 AM						
C KES	DEPART	3:45 PM						
	Runs To Load: All None Choose Subset Stops To Load: All Stop Requests None Subset Search Trips To Load: All Unassigned None Subset Search							

ntation, select "OK" in the top right of the

15

window; the Bell Time information for your school will populate in the Data Panel.

3. Bell Time View

The school and selected Bell Time will appear in the Data Panel; select the bell time by checking the box to the left. Once selected, all Runs and Stops for that School and Bell Time will load in the Data Panel.

Bell Time Views	^						
Cluster Select O	Augment Context						
KES - 8:45 AM, KENNEDY ELEMENTARY							

4. Run Covers

Navigate to the Run Covers Layer.

Layers:	O Trips (Run Masters	Run Covers
---------	-----------	-------------	------------

5. Bell Time Views

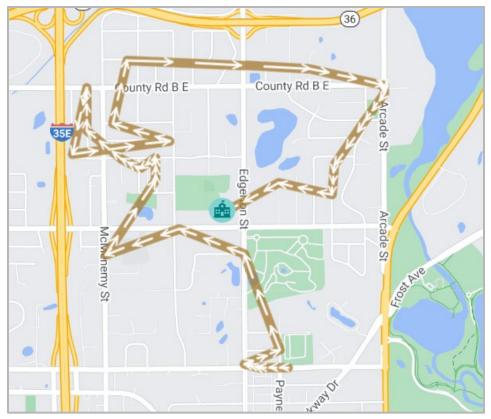

Select the School and Bell Time by checking on the box to its left in the "Bell Time Views" card. Once selected, the Bell Time, and all the Runs and Stops for that school and Bell Time will load in the Data Panel.

		Bell Ti	me Views			^

🗆 Run	← Turn left onto Kingston Ave E	43s	0.12 mi							
🗆 Run	Turn right onto Edgerton St	38s	0.28 mi							

7. Review Run Directions

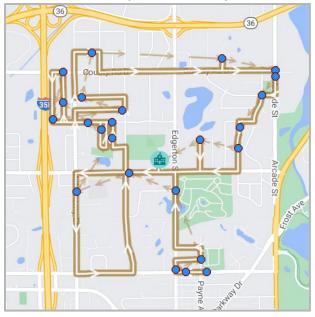

First you will navigate to the tool bar at the top of the Map Panel, and turn the "Paths" tool on.

17

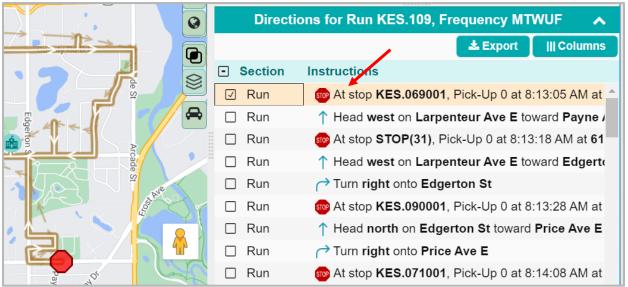

Education Logistics, Inc. Confidential Information. Do not communicate, disclose, or make available all or any part of this document without permission.

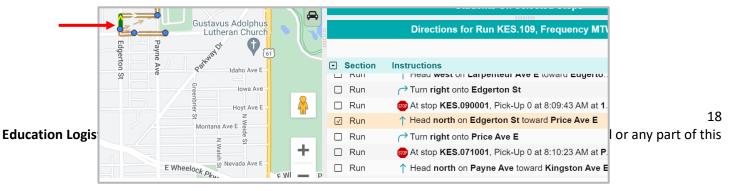

Once on, the run path will incorporate a more accurate view of the bus's path as seen below.

To review a detailed play-by-play of the bus's path, select the first instruction detailed in the "Directions for Run" card in the Workspace Panel. Selecting the first run direction will highlight the first stop on the Map to indicate the start of the run.

Using the down arrow on your keyboard, review each step in the Run Directions as it displays the directions simultaneously on the Map.

Make changes to the run when appropriate. Once the report is finalized, you have the option to export the Run Directions as a CSV file.

Adjust and Reset Stop Times on Selected Runs

You are working with the district's drivers to update their runs. The driver of Run 110.006 has requested two of the stops on his run be given 2 minutes for loading time, as the students at those stops are young, and usually need more time to become settled. You accomplish this by navigating to the Run Covers module, and making the appropriate changes to the stop times within the "Stops on Run" card.

Here's How:

1. Augment Context

The Augment Context window will automatically populate following the creation of a task. In this window, choose your School and Bell Times in either the School or Cluster drop down.

Augment BellT	ime Context								
						Cancel OK			
With B	ell Times fror	n a School		With B	ell Times fr	om a Cluster

To unlock the stop or checkpoint, select the "Stop Time" button that has the unlock icon next to it.

Stop Times

8. Reset Stop Time

Should the driver find that the stop or checkpoint time adjustments are not feasible for the run expectations, the user can reset the stop times back to its original specifications by navigating back to the "Run Masters" layer, to the "Runs in Play" card where you will select the "Reset Stop Times" button.

Runs In Play

Add a Turnaround

You were tasked with finalizing the Runs for the upcoming school year, and when you were reviewing Run KES 109 you noticed the bus was making an unnecessary 5-minute detour having to circle the block; you decided to add a turnaround to the run to prevent the bus from having to make the detour.

Here's How:

1. Augment Context

The Augment Context window will automatically populate following the creation of a task. In this window, choose your School and Bell Times in either the School or Cluster drop down.

When you have completed your search augmentation, select "OK" in the top right of the window; the Bell Time information for your school will populate in the Data Panel.

2. Bell Time View

The school and selected Bell Time will appear in the Data Panel; select the bell time by checking the box to the left. Once selected, all Runs and Stops for that School and Bell Time will load in the Data Panel.

Education Logistics, Inc. Confidential Information. Do not communicate, disclose, or make available all or any part of this document without permission.

3. Run Covers

Navigate to the Run Covers Layer.

Layers: O Trips O	Run Masters	Run Covers
-------------------	-------------	------------

4. Select School and Bell Time

Select the School and Bell Time by checking on the box to its left in the "Bell Time Views" card. Once selected, the Bell Time, and all the Runs and Stops for that school and Bell Time will load in the Data Panel.

Bell Time Views		^
	Cluster Select O	Augment Context
KES - 8:45 AM, KENNEDY ELEMENTARY		

5. Select Run

Run ID

☑ KES.109

Cover

Select KES 109 in the Runs card; it will populate graphically on the map. Additionally, navigate to the Workspace Panel and select KES 109 in the "Run Covers in Play" card.

6. Review Run Directions

First you will navigate to the tool bar at the top of the Map Panel, and turn the "Paths" tool on.

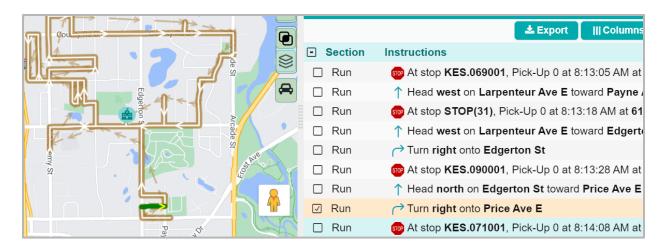

Once on, the run path will incorporate a more accurate view of the bus's path as seen below.

To review a detailed play-by-play of the bus's path, select the first instruction detailed in the "Directions for Run" card in the Workspace Panel. Selecting the first run direction will highlight the first stop on the Map to indicate the start of the run.

	🗆 Run	Turn right onto Price Ave E
	🗆 Run	😳 At stop KES.071001 , Pick-Up 0 at 8:14:08 AM at

Using the down arrow on your keyboard, review each step in the Run Directions as it displays the directions simultaneously on the Map.

While reviewing you discover an unnecessary detour, so the user needs to investigate a potential street for the bus to turnaround.

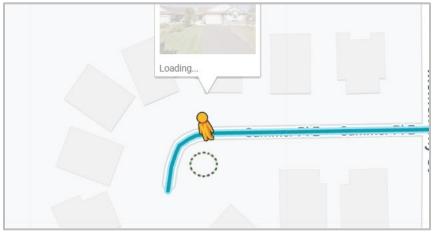

Upon further exploration there is a cul-de-sac down a street located just after the bus's stop McMenemy St.

Before the user can create a "turnaround", they need to investigate whether the bus can realistically make the turn down that street—we do so by utilizing the pegman tool.

Holding down your left click, drag the pegman to the center of the cul-de-sac and release. This will give you a 360 view of the street.

We determine the street will work as a turn around location for the bus; to create the turnaround, navigate to the "Run Covers in Play" card in the Workspace Panel, and select the "Paths" tool.

Add a Waypoint

You were tasked with finalizing the Runs for the upcoming school year. When reviewing the Run Directions, you notice the bus is making an unnecessary loop around the block to pick up one student—you would like to adjust the path to simplify the run for this trip utilizing the "Path Editor" and "Add Waypoint" tools.

Here's How

1. Augment Context

The Augment Context window will automatically populate following the creation of a task. In this window, choose your School and Bell Times in either the School or Cluster drop down.

	Augment Context	
		Cancel OK
Educatio	With Bell Times from a School School KES KENNEDY ELEMENTARY	Cluster
	Bell Times for Chosen School	School/Bell Times in Chosen Cluster
	School Type Bell Time	School Type Bell Time
	KES ARRIVAL 8:45 AM	

ite, disclose, or make available all or any part of this ission. When you have completed your search augmentation, select "OK" in the top right of the window; the Bell Time information for your school will populate in the Data Panel.

2. Bell Time View

The school and selected Bell Time will appear in the Data Panel; select the bell time by checking the box to the left. Once selected, all Runs and Stops for that School and Bell Time will load in the Data Panel.
