Easy-to-use tablet systems for navigation, student ridership, and driver log-ins bring your buses into the “internet of things.”

### At Your Fingertips

Route directions and electronic passenger lists give drivers accuracy and completeness of transportation data and eliminate paper.

### Real-Time Data

When students board the bus, their names and pictures appear on the tablet, making it easier to know who they are, where they’re going, and if they’re boarding the correct bus.

### Driver Time and Attendance

Drivers start their days out right by clocking in using the tablet on the bus, saving time and money, and increasing efficiency.

### Powerful Navigation

Our tablets give you turn-by-turn directions and seamless integration with your GPS hardware, using the power of routing to safely navigate planned bus runs and routes.

### Why Edulog Driver Portal Tablets and MDTs?

On days with driver shortages, you need the most from your onboard technology. Simplify your driver tools with Driver Portal. Optimize your routes, improve communication, and streamline bus substitution - instantly.
